

Scalable Industrial RFID Cabinet

Centralized management that grows with your workshops and sites.

SKU : UHF-ARI-EVO

Scalable Industrial RFID Cabinet

Technical data sheet

Features

- Centralized management of multiple cabinets
- Automated tool inventory
- Tool checkout and return recording
- Voice guidance for users
- Overdue tool alerts
- Card identification; optional facial recognition and fingerprint authentication

Applications

Maintenance workshops

Factories

Logistics centres

Overview

The scalable industrial RFID cabinet automates tool inventory and tracking while adapting to growing operations. Multiple cabinets can be managed through one central interface across workshops or sites.

Its touchscreen and voice guidance simplify tool checkout and return. Automatic transaction recording and overdue alerts improve traceability and help prevent missed returns. It is suitable for maintenance workshops, factories, and logistics centres.
